

Day 44 - MVP Engineering

MVP Features: User Query Input, Document Retrieval, Context Injection, LLM Response Generation, FastAPI Endpoint.

Post-MVP Features: Authentication, Chat History, Analytics Dashboard, Feedback System, Multi-user Support, Voice Input, Mobile App.

Core Function: The product answers user questions using retrieved knowledge from a document corpus.

`core_ai_loop(user_input)` retrieves context, builds a prompt, sends it to the LLM, and returns the response.

FastAPI POST /ask endpoint implemented with Pydantic validation and structured error handling.

10 Query Results: 8 Good, 1 Acceptable, 1 Poor (RAG vs Fine-Tuning retrieval mismatch).

Curl Verification Successful: Endpoint returned correct response.

Scope Decisions: Authentication, analytics, chat history, voice input, and mobile app excluded to maintain MVP focus.
